Purpose and procedure
Criteria for selection and review of articles for abstracting ................................................................. 34

EBN users’ guide
Evaluation of studies of causation (aetiology) ........... 36

Treatment
Higher oxygen saturation targets did not improve growth and neurodevelopment in extremely preterm infants ........................................ 41
A case manager plus psychoeducation reduced adverse outcomes in youth with type 1 diabetes ............ 42
Ear drops containing steroids were better than acetic acid for otitis externa ........................................ 43
Review: evidence is lacking that adults given fluids 1.5 to 3 hours preoperatively have greater risks of aspiration or regurgitation than those given a standard fast .... 44
Immediate removal of indwelling catheters after hysterectomy was not associated with adverse outcomes .................................................. 45
A nurse led smoking cessation intervention increased cessation rates after hospital admission for coronary heart disease ........................................ 46
Selective decontamination of the digestive tract reduced intensive care unit and hospital mortality in adults ........................................ 47
Nurse led clinics controlled hypertension and hyperlipidaemia better than usual care in diabetes ... 48
Oestrogen plus progestogen did not prevent cardiovascular disease in postmenopausal women .... 49
Review: regular inhaled short acting β2 agonists improve lung function in stable chronic obstructive pulmonary disease ................................ 50
Review: group interventions may improve coping, quality of life, and social support in patients with arthritic conditions, but more research is needed .... 51
Cognitive behavioural therapy improved benzodiazepine discontinuation in chronic insomnia .......... 52

Ethics consultations reduced hospital, ICU, and ventilation days in patients who died before hospital discharge in the ICU ........................................ 53
Cognitive stimulation therapy improved cognition and quality of life in dementia .................................. 54
Multisensory stimulation was not better than usual activities for changing cognition, behaviour, and mood in dementia ........................................ 55

Assessment (screening or diagnosis)
Review: the whispered voice test is accurate for detecting hearing impairment in children and adults .......... 56

Quality improvement
Group visits improved concordance with American Diabetes Association practice guidelines in type 2 diabetes ........................................ 57
A nurse case management intervention improved medical care given to older women with newly diagnosed breast cancer .................................. 58

Qualitative
The experiences of children and adolescents living with ADHD were reflected in 6 themes .............. 59
Living with the Ilizarov frame was better than expected ................................................................. 60
Unacceptability of routine screening for postnatal depression was related to the screening process, the intrusiveness of questions, and the stigma of disease .... 61
Patients resisted attempts to link smoking to their current medical problems in general practice consultations .......................................................... 62
Gender, age, religion, and tradition influenced the smoking attitudes and behaviour of Bangladeshi and Pakistani adults .................................. 63
The covenantal or communal values of surgeons and intensivists influenced end-of-life care in 3 intensive care units ........................................ 64

Glossary ........................................ 65
