## Contents

### Purpose and procedure
Criteria for selection and review of articles for abstracting

### EBN notebook
Nurses, information use, and clinical decision making—
the real world potential for evidence-based decisions in
nursing

### Treatment
Nurse led education plus direct access to imaging
improved diagnosis and management of urinary tract
infections in children
Review: antibiotics are moderately effective for acute
otitis media in children
Review: delaying a prescription reduces antibiotic use in
upper respiratory tract infections
A time limited, nurse led intervention reduced hospital
readmissions in patients with asthma and a history of
frequent admissions
A special nurse led liaison model of care reduced
unscheduled care for acute asthma in a deprived
multiethnic area
Websites offering information about depression or
cognitive behaviour therapy reduced depressive
symptoms
Review: patient education interventions improve
glycaemic control in adults with diabetes mellitus
Adjustment of antihypertensive medication using home
based, patient monitored blood pressure reduced both
intensity of treatment and blood pressure control
Coaching by non-drug prescribing health professionals
reduced total cholesterol concentrations in coronary
heart disease
Cholesterol lowering with simvastatin reduced stroke in
patients with, or at risk of, vascular disease
A nurse managed smoking cessation and relapse
prevention programme did not reduce smoking rates at
12 months beyond rates achieved by usual care in
women with cardiovascular disease
Review: single dose, oral paracetamol reduces moderate
to severe postoperative pain
Review: silver alloy catheters are more effective than
standard catheters for reducing bacteriuria in adults in
hospital having short term catheterisation
Review: elastic compression stockings prevent post-
venous thrombotic syndrome in patients with deep venous
thrombosis
Review: long acting β2 agonists and inhaled
corticosteroids reduce exacerbations in chronic
obstructive pulmonary disease

### Assessment (screening or diagnosis)
Review: screening instruments had sensitivities of 67–
100% and specificities of 53–98% for detecting major
depression in older primary care patients

### Quality improvement
An evidence based algorithm for nutritional support
accompanied by a multifaceted implementation
strategy improved some outcomes in critically ill
patients

### Qualitative
Review: mothers with HIV infection worked hard to
protect their children and preserve a positive maternal
identity
The experiences of women who survived an attempt on
their lives by an intimate partner represented a wide
spectrum of previous violence and control issues in the
relationship
After a stroke, women described changes that created a
sense of bodily strangeness
Atrial fibrillation had a negative impact on quality of
life, and treatment with an implantable cardioverter
defibrillator with atrial therapies helped patients regain
a sense of normalcy
3 themes described how self care management was
learned and experienced by patients with chronic
illness
Care that ran smoothly, was responsive to clients’
needs, and required no special effort for clients
to maintain was important for continuity in home
care
Patients’ expressions of awareness of memory problems
in early stage Alzheimer’s disease reflected varying
combinations of self maintaining and self adjusting
styles of responding

### Glossary
