EBN notebook
67  A beginner’s guide to probability
71  A spotter’s guide to study designs

Treatment
73  Oral prednisolone did not improve outcomes in preschool children with an attack of virus-induced wheezing
74  Review: pneumococcal vaccination does not prevent pneumonia, bacteremia, bronchitis, or mortality
75  Review: insufficient evidence exists for oral nutritional supplements as aids for recovery in treated active tuberculosis
76  Review: inhaled corticosteroids do not reduce mortality but increase pneumonia in chronic obstructive pulmonary disease
77  Community-based multidisciplinary screening and intervention by pharmacists and nurses reduced BP in diabetes
78  Review: evidence on dressings for superficial burns is of poor quality
79  Review: low molecular weight heparin reduces risk of venous thromboembolism in adults with leg immobilisation
80  Review: central venous catheters treated with anti-infective agents prevent catheter-related bloodstream infections
81  Review: alternative-foam mattresses and some operating-table overlays reduce pressure ulcers more than standard surfaces
82  Review: admission avoidance hospital-at-home decreases mortality at 6 months but does not differ from inpatient care for readmission
83  Home-based cardiac rehab was as effective as hospital-based rehab in improving cardiac risk factors
84  Hospital and home rehabilitation did not differ for functional competence in activities of daily living
85  Intensive nutritional supplementation improved functional outcome after stroke

July 2009 Vol 12 No 3

86  Review: exercise programmes prevent falls in elderly people

87  Review: long-term annual conversion rate to dementia was 3.3% in elderly people with mild cognitive impairment

88  Vaginal douching increased risk of sexually transmitted infections in high-risk adolescents

89  A multicomponent intervention improved diabetes care in primary care practices

90  A clinical prediction rule based on preoperative factors predicted the development of delirium after cardiac surgery
91  Review: the STRATIFY prediction tool has limited accuracy for predicting falls in hospital and geriatric rehabilitation inpatients

92  People who were obese tried diets but felt they needed ongoing support to empower them to make lifestyle changes
93  Patients with cancer believed that chemotherapy had to "hurt" or "cause side effects" to be effective
94  Specialist care was important for helping patients with cancer to live positively with malignant fungating wounds
95  Patients with end-stage COPD did not ask for help because they felt normal and did not realise the situation could be improved
96  Families with loved ones on mechanical ventilation in the ICU found a way to face "living with dying"
