## Contents

April 2017 Vol 20 No 2

### Editorial

- 33 Second thoughts about palliative sedation

### EBN opinion

- 35 Fields of nursing: do we need them, what should they be and when should nurses choose theirs?

### EBN perspective

- 37 Care of the older person  
39 Correction

### Research made simple

- 40 Undertaking research with children and young people

### Women's health and midwifery

- 42 Caesarean section increases risk of preterm birth in subsequent pregnancy  
43 Pregnancy in women with sickle cell disease is associated with risk of maternal and perinatal mortality and severe morbidity  
44 Alcohol consumption during pregnancy and breast feeding in Canada is prevalent and not strongly associated with mental health status

### Mental health

- 45 Impact of spousal bereavement for carers of people with dementia

### Adult nursing

- 46 Increased physical activity in women following myocardial infarction improves health-related quality of life  
47 Palliative care improves quality of life and reduces symptom burden in adults with life-limiting illness

### Child health

- 49 Parents require more information on how to manage their child's postoperative pain at home

### Health promotion and public health

- 50 Body mass index in adolescence may influence the risk of cardiovascular disease later in life  
51 Physical activity as a core component of the nursing curriculum

- 52 Cognitive-behavioural therapy may reduce high rates of service use among frequent primary care attenders  
53 Brief motivational intervention delivered in the emergency department can reduce hazardous drinking and risky sexual behaviour  
54 Task-based weight management programme delivered in primary care promotes better long-term weight loss among women from lower socioeconomic groups than usual practice

### Nursing issues

- 56 Greater nurse autonomy associated with lower mortality and failure to rescue rates  
57 Mindfulness training can reduce depression and anxiety among nurses

### Care of the older person

- 58 Spouses with partners with dementia living in institutional care develop visiting routines that help to maintain the spousal relationship  
59 Supportive care model could be used to inform interventions and service development to improve quality of care for older people  
60 More research needed on animal-assisted interventions in dementia

### Nurse education

- 61 Simulated patient deterioration situations reveals taxonomy of the decisions made by nursing students

### Resources

- 62 Resources page
