Editorial
97  Nursing and midwifery council registration for overseas children’s nurses: a perfect storm?

Research made simple
98  Ethnography: challenges and opportunities

EBN Opinion
101  Critical care nursing: caring for patients who are agitated

EBN perspective
104  Adult Nursing

Women’s health and midwifery
107  Inactivated influenza vaccination in first trimester does not appear to increase risk of birth defects

Adult nursing
108  Individualised assessment is required to establish the most appropriate anticoagulation option for patients
109  Mobile phone messaging delivering encouragement, reminders and education increases patient compliance with recommended exercise and results in positive short-term health behaviours
110  Patient self-testing and self-management of anticoagulation is safe and patients are satisfied with these programmes

Child health
112  Father-infant skin-to-skin contact appears to be beneficial, however paternal experiences of this need to be explored
113  Skin-to-skin care is an effective and safe intervention to reduce procedural pain in neonates

Nursing issues
114  Parenting concerns, parental identity and functional status influence medical treatment decisions of patients with advanced cancer
115  Cognitively impaired patients with heart failure may not perceive weight gain as a risk for decompensation

Care of the older person
117  Risk of injury higher in older adults with dementia than in those without
118  Pain-related palliative care challenges in people with advanced dementia call for education and practice development in all care settings
119  Frailty significantly increases the risk of fractures among middle-aged and older people
120  High-dose monthly vitamin D3 can help to prevent acute respiratory infections in older long-term care residents, but may increase risk of falls

Nurse education
122  Simulation training appears to improve nurses’ ability to recognise and manage clinical deterioration

Community and primary care nursing
124  Healthcare providers need to address misconceptions young women have around IUDs and their fertility

Resources

Correction
121  Correction: Community-based exercise interventions during pregnancy are perceived as a satisfactory and motivating form of exercise engagement
