Editorial
97 Nursing and midwifery council registration for overseas children’s nurses: a perfect storm?

Research made simple
98 Ethnography: challenges and opportunities

EBN Opinion
101 Critical care nursing: caring for patients who are agitated

EBN perspective
104 Adult Nursing

Women’s health and midwifery
107 Inactivated influenza vaccination in first trimester does not appear to increase risk of birth defects

Adult nursing
108 Individualised assessment is required to establish the most appropriate anticoagulation option for patients
109 Mobile phone messaging delivering encouragement, reminders and education increases patient compliance with recommended exercise and results in positive short-term health behaviours
110 Patient self-testing and self-management of anticoagulation is safe and patients are satisfied with these programmes

Child health
112 Father-infant skin-to-skin contact appears to be beneficial, however paternal experiences of this need to be explored
113 Skin-to-skin care is an effective and safe intervention to reduce procedural pain in neonates

Nursing issues
114 Parenting concerns, parental identity and functional status influence medical treatment decisions of patients with advanced cancer
115 Cognitively impaired patients with heart failure may not perceive weight gain as a risk for decompensation

Care of the older person
117 Risk of injury higher in older adults with dementia than in those without
118 Pain-related palliative care challenges in people with advanced dementia call for education and practice development in all care settings
119 Frailty significantly increases the risk of fractures among middle-aged and older people
120 High-dose monthly vitamin D3 can help to prevent acute respiratory infections in older long-term care residents, but may increase risk of falls

Nurse education
122 Simulation training appears to improve nurses’ ability to recognise and manage clinical deterioration

Community and primary care nursing
124 Healthcare providers need to address misconceptions young women have around IUDs and their fertility

Correction
121 Correction: Community-based exercise interventions during pregnancy are perceived as a satisfactory and motivating form of exercise engagement
