## Contents

### October 2017 Vol 20 No 4

#### Nursing issues
- 114 Parenting concerns, parental identity and functional status influence medical treatment decisions of patients with advanced cancer
- 115 Cognitively impaired patients with heart failure may not perceive weight gain as a risk for decompensation

#### Care of the older person
- 117 Risk of injury higher in older adults with dementia than in those without
- 118 Pain-related palliative care challenges in people with advanced dementia call for education and practice development in all care settings
- 119 Frailty significantly increases the risk of fractures among middle-aged and older people
- 120 High-dose monthly vitamin D3 can help to prevent acute respiratory infections in older long-term care residents, but may increase risk of falls

#### Nurse education
- 122 Simulation training appears to improve nurses’ ability to recognise and manage clinical deterioration

#### Community and primary care nursing
- 124 Healthcare providers need to address misconceptions young women have around IUDs and their fertility

#### Resources
- 125 Resources page

#### Correction
- 121 Correction: Community-based exercise interventions during pregnancy are perceived as a satisfactory and motivating form of exercise engagement

## Editorial
- 97 Nursing and midwifery council registration for overseas children’s nurses: a perfect storm?

## Research made simple
- 98 Ethnography: challenges and opportunities

## EBN Opinion
- 101 Critical care nursing: caring for patients who are agitated

## EBN perspective
- 104 Adult Nursing

## Women’s health and midwifery
- 107 Inactivated influenza vaccination in first trimester does not appear to increase risk of birth defects

## Adult nursing
- 108 Individualised assessment is required to establish the most appropriate anticoagulation option for patients
- 109 Mobile phone messaging delivering encouragement, reminders and education increases patient compliance with recommended exercise and results in positive short-term health behaviours
- 110 Patient self-testing and self-management of anticoagulation is safe and patients are satisfied with these programmes

## Child health
- 112 Father-infant skin-to-skin contact appears to be beneficial, however paternal experiences of this need to be explored
- 113 Skin-to-skin care is an effective and safe intervention to reduce procedural pain in neonates
