

Evidence-Based Nursing

Contents

Purpose and procedure	98	Review: behaviour therapy is effective for insomnia ...	118
EBN users' guide		Maintenance treatment with paroxetine, but not psychotherapy, prevented recurrent major depression in older people	119
Evaluation of studies of treatment harm.....	100		
Treatment		Assessment (screening or diagnosis)	
Delivery of 100%, 40%, and blow-by humidity did not differ for change in croup scores in children with moderate croup.....	105	Review: self report of hearing loss and the whispered voice test are useful for screening for hearing impairment	120
A self directed behavioural family intervention with telephone consultations improved toddler behaviour and parenting skills	106	Causation	
Review: vaccines prevent influenza and influenza-like illness in healthy children <16 years of age	107	Physical exertion at work during pregnancy did not increase risk of preterm delivery or fetal growth restriction.....	121
Review: antiviral agents reduce risk of influenza in healthy adults and alleviate symptoms faster than placebo	108	Quality improvement	
Review: existing evidence does not support behavioural or other specific interventions to prevent smoking relapse	109	Training and support for nursing home staff reduced neuroleptic drug use and did not increase aggression in residents with dementia	122
Review: self testing and self management increase the benefits and reduce the harms of anticoagulant therapy	110	Qualitative	
Acupuncture was better than no acupuncture but did not differ from minimal (sham) acupuncture for chronic low back pain at 8 weeks	111	Women offered prenatal screening had varying responses on becoming candidates for higher risk status	123
A low fat dietary pattern intervention did not reduce breast cancer, colorectal cancer, or CVD in postmenopausal women	112	Mothering served as a narrative backbone that supported a meaningful, well developed life in some teenage mothers.....	124
Calcium plus vitamin D did not prevent fractures or colorectal cancer in postmenopausal women.....	114	Review: meta-analysis of qualitative studies generated recommendations for healthcare professionals meeting with women who had experienced intimate partner violence.....	125
Allowing wounds to be uncovered and wet in the first 48 hours after minor skin excision did not differ from standard dry management for wound infections.....	115	The masculine concepts of control, strength, and responsibility to others were important to men with depression	126
Review: full body washing with skin antiseptics before surgery does not prevent surgical site infection.....	116	Delays in the diagnosis of lung cancer occurred because patients failed to recognise symptoms as serious and warranting medical attention	127
A target backrest elevation of 45° was not feasible for mechanically ventilated patients; elevations achieved did not prevent ventilator associated pneumonia	117	“Packaging” information about patient deterioration in terms of vital signs and the Early Warning Score facilitated nurses' communication with doctors.....	128
