

Evidence-Based Nursing

CREDIT: Samuel Ashfield/SPL

Contents

Purpose and procedure

97

EBN notebook

- 99 New beginnings
- 99 Accessing pre-appraised evidence: fine-tuning the 5S model into a 6S model
- 102 Using decision analysis to integrate evidence into decision making

Treatment

- 105 Review: inhaled corticosteroids reduce wheezing and asthma exacerbations in infants and preschool children
- 106 Review: culture-specific programmes improve some asthma-related outcomes in children and adults from ethnic minority groups
- 107 Review: high-quality evidence on the effectiveness of laxatives for functional constipation in children is limited
- 108 Review: cancer-related decision aids improve patient knowledge overall and reduce anxiety in screening settings
- 109 Diets with different targets for intake of fat, protein, and carbohydrates achieved similar weight loss in obese adults
- 110 A behavioural weight-loss programme reduced urinary incontinence more than an education programme in overweight and obese women
- 111 A very low calorie diet plus lifestyle counseling improved mild obstructive sleep apnoea in overweight patients
- 112 Nurse-led care was non-inferior to physician-directed care in symptomatic moderate to severe obstructive sleep apnoea
- 113 Below-knee cast and Aircast brace improved ankle function at 3 months in acute severe ankle sprain
- 114 Review: mechanical bowel preparation before colorectal surgery does not provide any benefit and may be harmful
- 115 Intravascular catheter dressings with chlorhexidine-impregnated sponges reduced infections in the ICU
- 116 Review: compression was effective for healing venous ulcers, and multicomponent systems were better than single-component ones

October 2009 Vol 12 No 4

- 117 Review: silver-releasing dressings improve healing and quality of life in patients with non-healing chronic wounds
- 118 Review: little evidence exists for type of dressing or support surface or for nutritional supplements for pressure ulcers
- 119 Review: exercise interventions improve functional and physical performance but not activities of daily living in older adults

Causation

- 120 A combination of 4 health behaviours was associated with increasing risk of stroke
- 121 Review: anger and hostility increase risk of coronary heart disease events in healthy people and those with existing CHD
- 122 Smoking increased risk of cervical cancer, independent of infection with high-risk HPV types

Clinical prediction guide

- 123 Absolute CVD risk, stratified by risk score, was 20% higher in primary care patients with CVD than in those without CVD

Qualitative

- 124 Women who coped successfully with progressive MS learned to confront their diagnosis and live with its unpredictable changes
- 125 6 themes described how women with early-stage breast cancer perceived and experienced treatment decision making
- 126 Men experienced and responded to the embodied and emotional effects of prostate cancer in different ways
- 127 Patients' attitudes, the hospital environment, and staff behaviour affected patients' dignity on a surgical ward
- 128 Loss of continuity and lack of closure in therapeutic relationships were associated with feelings of abandonment at the transition to end of life care
