Evidence for nurse education

50 Problem-based learning in nurse education

Commentaries

Adult nursing

52 Perceived stress can negatively affect blood glucose control and fear of hypoglycaemia in people with type 1 diabetes

53 Preparing ward nurses for intensive care units during a state of emergency: an example from COVID-19 pandemic

54 Real-time continuous glucose monitoring is not inferior to current standard of care for inpatient glycaemic monitoring and may decrease recurrent hypoglycaemic events

55 Family systems nursing conversations (FSNCs) have the potential to improve family functioning and well-being

Child health

56 Physical activity during childhood cancer treatment: survivors want it, parents want it, peers can facilitate it

57 OPEN ACCESS Limiting recreational screen media use increases physical activity among children but not their parents

58 Child–parent–nurse triad and its influence on children's pain management

Health promotion and public health

59 Understanding the signs and symptoms of the 2022 monkeypox outbreak is crucial for clinicians, public health practitioners and gay, bisexual and other men who have sex with men (GBMSM)

61 Healthcare inequities in the underserved population beyond the fanfare surrounding a pandemic: COVID-19

62 Qualitative study outlines strategies promoting linkage to care in homeless and marginally housed patients with hepatitis C

63 Precision suicide prevention programme may help reduce the suicidality of males without known mental health problems

Mental health

64 Oncology nurses need more education and support to help reduce suicide rates in patients with cancer

65 Non-pharmacological treatments may improve cognition in mild cognitive impairment

66 Mental health services should acknowledge and respect refugee social and cultural values to increase update/use

Nurse education

67 Simulation-based educational programme improves students' flow communication and communication self-efficacy

68 Concept of unbearable suffering needs to be better understood by nurses

69 Use of an educational board game intervention may assist medication knowledge acquisition for nursing students

70 Incivility impacts on sense of belonging in undergraduate nursing students

Nursing issues

71 Sleep deprivation provokes aberrant dynamic brain activity and memory decline among night shift nurses

72 Competing wishes of next-of-kin versus the deceased when it comes to organ donation consent

73 Nurses' Attitudes Towards Family Importance in Nursing Care Across Europe

74 Patient safety during the COVID-19 pandemic: learning from what goes right facilitates future safety improvements

Women's health and midwifery

75 Fundamental role of intermittent fetal monitoring in the management of water births

76 Caution in the use of antenatal corticosteroids beyond 34 weeks age due to non-competent cognitive development in infants

77 Cord milking in non-vigorous infants: promising, but further information is needed

78 Women voice their need for personalised risk messaging, effectively balancing a 'better safe than sorry' approach with a need for evidence-based risk communication

Care of the older person

79 There are limited amenities on the sailboat we put older persons on for their post emergency department journey

80 Association between affective disorders and frailty across the life course challenges systems of care

Learning disabilities

81 Objective measurement required to disentangle health effects of sedentary behaviour versus physical activity on adults with intellectual disability

82 Sleep problems in adults with learning disabilities: the compelling need for objective and methodologically consistent studies

Palliative care

83 Limited knowledge about what matters to older people with multimorbidity hinders appropriate palliative care provision

84 End of life may be a lonely experience, say healthcare professionals
