

# Evidence-Based Nursing

## Contents

October 2011 Vol 14 No 4

### Editorial

- 95 Let's talk about nursing

### Research made simple

- 97 What is a randomised controlled trial?

### Adult nursing

- 99 Use of sleep care guidelines in a surgical intensive care unit reduces noise levels and improves patient-reported sleep quality
- 100 An intervention to improve compliance with guidelines for prevention of venous thromboembolism improves the proportion of hospitalised patients receiving appropriate prophylaxis
- 102 A systematic review and meta-analysis of ICU telemedicine reinforces the need for further controlled investigations to assess the impact of telemedicine on patient outcomes
- 103 Open and honest discussions about kidney transplantation recommended for people undergoing haemodialysis
- 104  Benefits of nurse-led cardiovascular prevention for patients with type 1 diabetes
- 105 Interview of 15 Norwegian patients informed that there is no curative treatment for their cancer finds oscillation between feelings of suffering and striving for health

### Care of the older person

- 107 Reducing stress burden and objective burden in spousal caregivers through implementation of Powerful Tools for Caregivers
- 108 A music-based multitask exercise programme is a promising intervention for improving gait, balance and fall risk in older adults
- 109 Further research is required to provide evidence of the effectiveness and feasibility of the nurse-led, case management approach to the care of older adults with chronic comorbid conditions
- 111 In older adults with chronic non-cancer pain, short-term use of opioids reduces pain and physical disability but does not benefit mental health, and 25% discontinue due to adverse effects

### Child health

- 113 Is there a real benefit to zinc and probiotic fortified ORS in children under the age of 3 years?

### Pain management

- 115 Nurse-initiated analgesia improves patients' pain experience: time for change?

### Mental health

- 117  Bright light treatment is effective in treating older patients with non-seasonal major depression

### Midwifery

- 119 Travel time from home to hospital and adverse perinatal outcomes in women at term in The Netherlands

### Nursing issues

- 121 Mixed methods evaluation of in-hospital nurse prescribing finds similar care standards and provision between nurses and doctors
- 122 Shifts with nurse understaffing and high patient churn linked to heightened inpatient mortality risk in a single site study

### Primary health care

- 124 Consultations between nurse prescribers and patients with diabetes in primary care: a qualitative study of patient views

### Womens health

- 126 Impact of the genetic screening revolution: understanding and meeting the needs of previvors with a known family mutation in *BRCA/BRCA2*
- 128  Care from health visitors trained in psychological intervention methods may prevent depression in mothers not depressed 6 weeks postnatally
