

Evidence-Based Nursing

Contents

April 2012 Vol 15 No 2

Editorial

- 33 Don't keep blaming nurse education

Research made simple

- 34 What is a p value and what does it mean?

Adult nursing

- 35 Motivational interviewing improves patients' mood and reduces mortality 12 months poststroke

- 36 Age, comorbidity and functional status influence end-of-life decisions in critical illness, while nationality, ethnicity and clinician experience influence the aggressiveness of medical care

- 37 Women's experience of intimacy following their partner's first myocardial infarction reveals three common themes: perceived responsibility and limited life space; sense of life loss; and finding another dimension of life

- 38 Childhood onset and duration of obesity are significant risk factors for type 2 diabetes in mid-adulthood

Pain management

- 40 Pain prevalence at a Swedish university hospital: 65% of inpatients reported pain in the past 24 h

- 41 Review of internet-based interventions for pain finds some evidence to support the effectiveness of cognitive and behavioural interventions, but further quality study is needed to assess the effect of peer support and social networking programmes

- 42 Concerns about medication and medication adherence in patients with chronic pain recruited from general practice

Child health

- 44 Two-year findings of an implementation intention intervention for teenage women show reduced consultations for emergency contraception or pregnancy testing and a trend towards reduced pregnancy rates

- 45 Power of peer leaders in improving self-management skills among adolescents with asthma

- 46 Are antiemetics still contraindicated for gastroenteritis in children? Solid evidence now supports the safe use of ondansetron

- 47 UK survey finds that 69% of a sample of teenage schoolgirls have some degree of iodine deficiency

- 48 Over 12 months, an immunisation navigator programme for urban adolescents increased immunisation rates by approximately 13% compared with control

Midwifery

- 50 Prenatal exposure to second hand smoke and adverse perinatal outcomes

- 51 The impact of gestational weight loss on maternal and neonatal outcomes

Nursing issues

- 53 Changes in patient outcomes coincide with increased nursing hours

- 54 Does certification of staff nurses improve patient outcomes?

- 55 Advanced practice nurses use role modelling, teaching, clinical problem solving and change facilitation to promote evidence-based practice among clinical staff nurses

Primary health care

- 57 People with hyperlipidaemia who followed a dietary portfolio of cholesterol-lowering foods achieved a greater reduction in LDL cholesterol over 6 months than those who received advice to follow a low-saturated fat diet

Care of the older person

- 60 Delirium superimposed on dementia is pervasive and associated with restraint use among older adults residing in long-term care

- 61 Residential care facilities providing multidisciplinary integrated care for older people achieve higher scores on 32 risk-adjusted quality of care indicators than facilities providing usual care

- 62 Malnutrition and cognitive impairment among people aged 60 years and above living in regular housing or in special housing in Sweden: a population-based cohort study

- 64 Nurses trained in the use of the ROSIER tool can assess signs and symptoms of stroke with comparable accuracy to doctors performing standard neurological assessment
