

# Evidence-Based Nursing

## Contents

July 2012 Vol 15 No 3

### Editorial

- 65 How is evidence used in evidence-based policy?

### Research made simple

- 66 What is a CI?

### Resources

- 67 EBN resources page

### Health promotion

- 69 Normal weight is associated with significant reductions in cardiovascular risk for adults, even in those who were overweight or obese as children
- 70 A review of long-term effects of low sodium diet versus high sodium diet on blood pressure, renin, aldosterone, catecholamines, cholesterol and triglyceride
- 71 Review: lifestyle modifications and pharmacotherapy for cardiovascular risk factors are associated with improvements in erectile dysfunction

### Nursing issues

- 73 Research utilisation and critical thinking among newly graduated nurses – predictors for research use: a quantitative cross-sectional study
- 74 Self-report questionnaires of nurses in Taiwan reveal that critical thinking ability and nursing competence are both at the middle level and there is a correlation between the two

### Midwifery

- 76 Use of non-aspirin NSAIDs during pregnancy may increase the risk of spontaneous abortion
- 77 The association between prenatal alcohol exposure, fetal growth and preterm birth: evidence from a systematic review and meta-analyses

### Women's health

- 79 Various vitamin and mineral supplements are observed to increase mortality risk in older women, with the exception of calcium, which decreases risk
- 80 Mindfulness meditation for women with irritable bowel syndrome – evidence of benefit from a randomised controlled trial
- 81 Primary care-based training and support interventions are successful in increasing identification and referral of women experiencing domestic violence

- 82 Risk of venous thromboembolism in oral contraceptive users varies according to progestin type

### Child health

- 84 Cochrane review: non-nutritive sucking, kangaroo care and swaddling/facilitated tucking are observed to reduce procedural pain in infants and young children
- 85 Breastfeeding is important for cognitive development in term and preterm infants
- 86 Flushing of intravenous locks in neonates: no evidence that heparin improves patency compared with saline
- 87 Nine-year-old children exposed to more socio-demographic, physical and psychosocial risks tend to have poorer self-regulatory behaviour and are more likely to show The correct author name is Robert H. Bradley an increase in BMI during the next 4 years

### Primary health care

- 89 Primary care interventions for obesity: behavioural support, whether delivered remotely or in person, facilitates greater weight loss over 2 years than self-directed weight loss
- 90 Vitamin E increases prostate cancer risk in middle-aged men relative to placebo: no significant association observed with selenium, either alone or in combination with vitamin E

### Care of the older person

- 92 The efficacy of psychosocial factors in predicting pain and functional outcomes following knee replacement surgery

### Adult nursing

- 94 Remote physician–pharmacist team-based cholesterol management in diabetes mellitus improves achievement of LDL-C target levels compared with access to health IT resources only
- 95 Cochrane review: in adults with chronic kidney disease regular exercise improves physical fitness, walking capacity, heart rate and blood pressure and some nutritional parameters

### Mental health

- 97 Metabolic monitoring for patients on antipsychotic medication: are we failing to provide reasonable standard of physical healthcare?
