Contents

Editorial

- 65 The state of play in child and adolescent mental healthcare services (England): not in front of the children?

Research made simple

- 66 Validity and reliability in quantitative studies

Midwifery

- 68 Among women planning to exclusively breastfeed, in-hospital formula supplementation is associated with almost tripled risk of breastfeeding cessation by 2 months
- 69 Blogs from 11 expectant first-time fathers reveal both excitement and fears in their new role
- 70 Non-pharmacological approaches for pain relief during labour can improve maternal satisfaction with childbirth and reduce obstetric interventions
- 71 Low-dose aspirin reduces morbidity and mortality in pregnant women at high-risk for preeclampsia
- 72 Modifiable risk factors for miscarriage identified
- 73 Women's health locus of control during pregnancy may predict risk for postpartum depression

Adult nursing

- 74 For newly diagnosed type 2 diabetes, a low-carbohydrate Mediterranean diet may delay need for medication and improve chance of remission compared to a low-fat diet
- 75 Uncovering male and female experiences of irritable bowel syndrome
- 76 Clarification of the common aspects of dignity in end-of-life care
- 77 Patients with heart failure, and their partners, value being seen and supported together
- 78 Renal transplant failure has a devastating impact requiring greater recognition and support
- 79 Non-cancer palliative care in the community needs greater interprofessional collaboration to maintain coordinated care and manage uncertainty

Child health

- 80 A fortified follow-up formula for 3–4-year-olds reduces episodes of acute respiratory infection and antibiotic use compared with cow's milk
- 81 Mothers of very preterm infants experience less stress and depressive symptoms if the neonatal unit has good measures to reduce painful experiences for the infant

- 82 General practice web-based decision aid improves MMR vaccination uptake
- 83 A single nurse-led educational session may facilitate transition from paediatric to adult healthcare for adolescents with heart disease

Health promotion

- 84 Web-delivered personalised normative feedback for college students on alcohol consumption and sexual situations reduces alcohol-related risky sexual behaviour

Primary healthcare

- 85 Two simple questions may be used as the first screening step for alcohol problems in primary care: systematic review
- 86 General practice nurses report minimal support as one obstacle to implementing self-management strategies for long-term conditions
- 87 Self-monitoring and self-titration of antihypertensive medication reduces systolic blood pressure compared with usual care
- 88 Primary care professionals and abused women have differing awareness of domestic abuse: a new framework may help facilitate discussions
- 89 A Health Belief Model delivered by nurses improves health outcomes for people with chronic obstructive pulmonary disease in China

Nursing issues

- 90 Review: does chlorhexidine prevent ventilator-associated pneumonia?
- 91 Review: chlorhexidine-impregnated dressings reduce risk of colonisation of central venous catheters and risk of catheter-related bloodstream infection
- 92 Acute hospital admission can be disruptive for people with cognitive impairment, and professionals need the skills and resilience to meet their needs
- 93 Peritoneal dialysis: older patients report better quality of life than younger
- 94 Physical and sexual intimate partner violence negatively affects women's mental health and their children's behaviour
- 95 Compassion is an essential component of good nursing care and can be conveyed through the smallest actions

Care of older people

- 96 Higher antihypertensive dose increases risk of falls in older people

PostScript

- 67 Correction
