Contents

Editorial

- 97 Desire to hasten death

Research made simple

- 98 What is an Odds Ratio? What does it mean?

Resources

- 100 EBN Resources Page

EBN opinion

- 105 Shape of caring review: impact for children's nursing education

Public health

- 107 Cases of Ebola virus disease predicted to rise from hundreds to thousands per week unless control measures improve

Women's health

- 108 Professionals providing cervical screening may require training and support on how to provide safe and sensitive care for survivors of childhood sexual abuse

Midwifery

- 109 Antiepileptic drug use during pregnancy: sodium valproate is associated with lower offspring IQ
110 Review: structured physical activity during pregnancy reduces risk of caesarean delivery
111 Review: higher caffeine intake during pregnancy increases risk of low birth weight

Mental health

- 112 Abused women report different levels of care and support from general psychiatric services
113 In depression, increased psychological reactance is associated with poorer treatment compliance

Adult nursing

- 114 An online system shows promise for the early detection of osteoporosis in Asian women
115 Carers providing end-of-life care at home have limited formal support in managing medications
116 Alteplase for ischaemic stroke: increased risk of intracranial haemorrhage is balanced by improved stroke outcomes, particularly if treated within 3–4.5 h of onset

October 2015 Vol 18 No 4

Child health

- 117 A range of personality traits and health beliefs influence mental health help-seeking behaviour in young people
118 Heel stick test for obtaining blood samples in neonates: both swaddling and heel warming may help, but heel warming appears to provide greater pain reduction

Health promotion

- 119 Behavioural counselling improves physiological outcomes in those with cardiovascular risk factors

Primary healthcare

- 120 Review suggests mobile phone interventions improve medication adherence; rigorous longer term studies are needed to confirm effects

Pain management

- 121 Clinically significant pain is experienced by just over a third of all hospitalised patients, affecting around a half of surgical and a quarter of medical admissions

Nursing issues

- 122 An online learning module improves specialist palliative care nurses' pain assessments and patient-reported pain
123 Self-reported medication adherence for heart failure is associated with lower risk of all-cause hospitalisation and death
124 A checklist-based tool for postoperative complications may improve and standardise patient care
125 A nurse-facilitated cognitive behavioural self-management programme for heart failure is no more cost effective than usual CBT care
126 Goals of care are important for older adults with severe illness and their families, and are infrequently addressed by health professionals

Care of the older person

- 127 Prehospital decision system supports appropriate transfer of older adults direct to a community-based hospital
128 A psychological intervention for family carers of people with dementia is clinically and cost effective at reducing carer depression and anxiety levels over 2 years of follow-up
