Contents

Editorial

- 31 Keeping the patient front and central: the role of storytelling

EBN Opinion

- 33 Meaning making And Generativity In Children and Young people with Life limiting conditions (MAGICYL)

Research made simple

- 36 Integration of a theoretical framework into your research study

- 38 How to appraise mixed methods research

EBN Perspective

- 42 Maternity and postpartum care: perspectives

Commentaries

Child health

- 44 Maternal dominance and reliance on over-the-counter analgesia can hinder development of healthy coping strategies for adolescents in pain

Adult nursing

- 45 Tai Chi: a promising adjunct nursing intervention to reduce risks of cardiovascular disease and improve psychosocial well-being in adults with hypertension
- 46 Home management of heart failure based solely on symptom and fluid management, adherence and knowledge may not fully meet the complex needs of patients
- 47 Higher rates of depression among women living with Coronary Heart Disease are associated with poorer treatment outcomes and prognosis
- 48 Body sensor providing feedback to bedside staff reduced the prevalence of pressure ulcers in patients with critical illness

Care of the older person

- 49 Evidence that active pain treatment improves sleep quality and quantity in people with depression and dementia

- 50 International study reveals aged patients with dementia frequently receive 'inappropriate prescriptions'

- 51 Better support and education is imperative to bolster informal at-home carers of people with cognitive impairment and reduce incidences of involuntary treatment of older adults in their homes

Nurse education

- 52 E-learning may be no better than traditional teaching for continuing education of health professionals

Nursing issues

- 53 Nursing interventions and research contribute to transforming health outcomes and improving the patient's experience of living with cancer

Mental health

- 54 Exposure-based cognitive behavioural therapy is effective in reducing post-traumatic stress disorder severity in emergency service personnel
- 55 When compared to comparator treatment, specialist interventions for anorexia nervosa are more effective in reducing weight-based symptoms, but not psychological symptoms

Health promotion and public health

- 56 Is exercise and yoga a panacea for recovery from sexual violence?: knowing the risks and benefits of yoga and exercise is important

Women's health and midwifery

- 57 Recent data indicate that black women are at greater risk of severe morbidity and mortality from postpartum haemorrhage, both before and after adjusting for comorbidity
- 58 Grounded theory approach describes individual and external factors implicated in processing a work-related traumatic event in midwives and obstetricians
- 60 Bariatric surgery is an effective means of improving adverse delivery complications in term births
- 61 Women who experience threatened preterm labour need early and accurate assessment, a clear management plan and continuity of care to reduce stress and anxiety

Miscellaneous

- 62 Correction: *How to appraise quantitative research*

Resources page

- 63 EBN resources page
