# Contents

**July 2020 Volume 23 Issue 3**

## Editorial

**65** Easing lockdown for school children: why so contentious?

## Research made simple

**68** What are Delphi studies?

## Commentaries

### Child health

**70** Engaging teenagers with text-message services for glycaemic control

**71** Moderate-to-vigorous exercise is beneficial and can improve symptoms of fatigue and depression in young people with paediatric-onset multiple sclerosis and other demyelinating conditions

### Adult nursing

**72** Study of nurses' use of early warning scoring systems for patient deterioration highlights the need to strengthen nurses' knowledge and confidence in their clinical judgement in using these tools

**73** Fan therapy is a treatment option for relieving of chronic breathlessness

### Mental health

**74** The largest meta-analysis of pharmaceutical treatments of Generalised Anxiety Disorder consolidates current knowledge and reveals convincing effectiveness of Venlafaxine

**75** Mental health nurses can play a key role in supporting gay, bisexual and two-spirit men experiencing mental health challenges and inequalities

**76** Fathers get depressed too: lifestyle and relationship factors, stress and sleep quality are associated with depression in new fathers in the first 6 months postbirth

**77** Medication assisted therapy (MAT) for opioid use disorder (OUD) in youth improves outcomes and saves lives

### Women's health & midwifery

**78** It is time to consider labour companionship as a human rights issue

**79** Provider-level characteristics are significantly associated with the increased likelihood of mastectomy over conservative surgery among elderly women with breast cancer

### Care of the older person

**80** The evidence base for pain management of people with dementia in the community is weak and needs to be improved

**81** Being non-frail and having an elective procedure are the strongest predictors associated with functional recovery among older survivors of major surgery

### Nurse education

**82** Student nurses require a supportive environment when exercising their moral obligation for patient safety

### Nursing issues

**83** Australian secondary analysis reveals that vascular access device procedures aimed at preventing harm may be causing skin complications

**84** Qualitative research shows that preferences for place of end-of-life care and death are shaped by the uncertainty of living with a life-limiting illness for patients and family caregivers and are neither synonymous nor stable

**85** Pain assessments in emergency departments lack consistency and validity, and this impacts effective pain management

**86** Metasynthesis: dying adults' transition process from cure-focused to comfort-focused care

**87** Compounded creams no better than placebo creams for localised chronic pain

**88** Negative workplace behaviour: nurses' power games, blame culture and incivility—why nurses do not care for each other

### Community and primary care nursing

**89** Duration of antibiotic treatment for common infections frequently exceeds recommended guidelines, potentially impacting antimicrobial resistance

### Health promotion and public health

**90** Evaluation of care coordination among healthy community-dwelling older adults finds promising but minimal impact

**91** Maternal weight status before pregnancy is strongly associated with offspring weight status in childhood

**92** School asthma intervention programme effectively improved children's knowledge and attitudes, and led to decreased hospital admission, length of stay and school absences
