Contents

Editorial

- 29  Spotlight on maternal mental health: a prepandemic and postpandemic priority

OPEN ACCESS

Resources

- 31 Resources page

Research made simple

- 32  Five tips for developing useful literature summary tables for writing review articles

EDITOR'S CHOICE

Commentaries

Child health

- 35 Association between COVID-19 and Kawasaki-like disease in children is a topic that needs further investigation

- 36 Direct-to-consumer telemedicine visits demonstrate decreased antibiotic prescribing quality in paediatric clients with acute respiratory infections

Health promotion and public health

- 37 Increased sedentary behaviour is associated with increased depression symptoms in adults

- 38 Evidence from randomised trials linking intake of red meat to diseases—including cardiovascular disease and cancer—is weak

- 39 Reducing consumption of red meat may have a very small effect on all-cause mortality and cardiometabolic diseases

Nurse education

- 40 Assertiveness training during early undergraduate years has the potential to increase students' confidence and ability to act as patient advocates

Nursing issues

- 41 Use of personal protective equipment reduces the risk of contamination by highly infectious diseases such as COVID-19

- 42 Complex interactions between provider, organisation and patient level characteristics influence the effect of pressure ulcer preventive care interventions

- 43 A workplace sales ban and motivational intervention can reduce sugar-sweetened beverage intake and improve cardiometabolic health

- 44 Patients need more than just verbal instructions upon discharge from the emergency department

- 45  Without adequate nursing support for families, dying at home threatens the values of a good death

EDITOR'S CHOICE

- 46  Social media is a source of health-related misinformation

EDITOR'S CHOICE

- 47 Better patient activation is a precursor to engagement in shared decision making

April 2021 Volume 24 Issue 2

Learning disabilities

- 48 Time to increase the involvement of persons with intellectual disability in palliative care and research

- 49 Ethical dilemmas and legal ambivalence affects the midwives' perception for providing sexual and reproductive health consultation to women with intellectual disability

Care of the older person

- 50  Feeling fearful and lonely are indicative experiences of emotional distress for people with dementia

OPEN ACCESS

- 52 Family caregivers expect a patient and family centric approach in holistic end-of-life provision

- 53  Hopelessness during acute hospitalisation is a strong predictor of mortality

OPEN ACCESS

- 54 Delirium occurrence in hospitalised older people is positively associated with development of dementia postdischarge

- 55 Relational care in older persons nursing is not just a consideration but an organisational priority

- 56 Frailty is associated with a higher use of potentially inappropriate medications among community-dwelling older adults

Women's health and midwifery

- 57 Uncovering the use and misuse of opioid analgesia in a pregnant and non-pregnant female population

- 58 Cannabis use in pregnancy: a harm reduction approach is needed with a focus on prevention and positive intervention

- 59 COVID-19 and pregnancy outcomes: initial findings show little threat, but more data are needed

Adult nursing

- 60 Survivorship care plans have minimal impact on health actions

- 61 Current state of knowledge around nurse-led cardioversion: a launchpad for future projects

- 62 Shorter intervals and sequential administration of adjuvant chemotherapy are effective in reducing the 10-year risk of recurrence and death in early breast cancer women without detrimental effects

- 64 Nurses' intuitive worrying predicts physiological changes in patients' vital signs

- 65 Bariatric surgery could reduce the risk of specific types of breast cancer

Mental health

- 66 Peer mentorship of hospital inpatients with substance use disorders is associated with beneficial outcomes

- 67 Short therapy programmes may reduce the risk of suicide reattempts

- 68 Depressive symptoms in the last year of life: early screening and varied treatment pathways needed
