Contents

Editorial

- 1 Abandoned by governments and employers

Research masterclass

- 4 'Engagement and involvement matrix': a co-creation blueprint for inclusive community engaged research and knowledge mobilisation

Evidence for nurse education

- 10 Two decades of trends in nursing students' pain management knowledge and attitude

Commentaries

Adult nursing

- 12 Virtual visiting supports both the patient–family connection and infectious disease measures during restricted inpatient visiting
- 13 Staff training and the use of rapid, accurate and user-friendly tools for delirium screening could improve the diagnosis of delirium in the elderly referred to the emergency department
- 14 Importance of family counselling for anticipatory grief in cancer care

Child health

- 15 Depression in young adulthood is strongly linked to childhood and adolescent social environment
- 16 Faltering growth is an important finding in infants and children with congenital heart disease
- 17 Personal protective equipment can affect the timing of the neonatal resuscitation interventions
- 18 Peer-to-peer support in the neonatal intensive care unit may improve parents' experiences with their hospitalised infant
- 19 Advocacy for the dependent children of parents with a life-limiting condition

Health promotion and public health

- 20 Guidelines for diagnosing 'long Covid' in patients living with postacute sequelae of COVID-19 (PASC)
- 21 All genders need comprehensive, accessible and quality routine medical care
- 22 Pre-existing health inequalities in vaccine uptake were exacerbated among ethnic communities during COVID-19 pandemic

Mental health

- 23 Student mental health crisis and the question of responsibility: Should universities invest more resources in prevention than intervention?
- 24 PTSD increases suicide risk in the community especially for young women from deprived communities
- 25 Guiding family carers on medication management when a person with dementia is discharged from hospital

January 2023 Volume 26 Issue 1

- 26 Risk of developing post-traumatic stress disorder high among post survivors of severe COVID-19 infections

- 27 Mental health conditions of pandemic healthcare workers: findings from a systematic review and meta-analysis

- 28 Tailored preventative community-based mental health support for lesbian, gay and bisexual people can reduce their suicidality

Nurse education

- 29 Students with high internal moral principles and accurate perceptions of dishonest behaviors are more likely to view themselves as academically honest in classroom and clinical settings
- 30 Nurses need quality education and supportive work environments to enhance medication safety
- 31 Addressing implicit racial bias: do they affect nursing education?
- 32 Simulations can improve nursing education in general, especially in psychiatric simulation and critical care

Nursing issues

- 33 Good nursing teamwork reduces fatigue but cannot offset the strain of excessive workloads
- 34 Risk assessment and strategic action are required to protect at risk minority groups of healthcare workers in future COVID-19 pandemics
- 35 Model of moral agency that encompasses nurses' and midwives' perceptions of off-duty emergency response
- 36 Challenges to building a trusting doctor–patient relationship with the transgender non-binary patient
- 37 Cognitive bias is a crucial factor in nurses' decision making

Women's health and midwifery

- 39 Optimising mother–baby outcomes of pregnancy and childbirth in prison requires both individual and systems review
- 40 Midwives experiences are an important factor in identifying and supporting victims of sex trafficking
- 41 Maternal congenital heart disease can have adverse long-term outcomes
- 42 Socioeconomic, ethnic inequalities and adverse pregnancy outcomes: time for the disparities to disappear
- 43 Analysis on the quality and safety of care in relation to neonatal outcomes in alongside midwifery units is reassuring, identifying that specific maternal risk factors have highest predictive value in assessing risk
