## Contents

### Editorial

- 85 We need to talk about research ethics committees (RECs)

### Research made simple

- 87 Research made simple: an introduction to feminist research

### Research masterclass

- 89 Research spotlight: constructivist grounded theory

### Evidence for nurse education

- 91 Strategies for policy competence education for nurses

### Commentaries

#### Nurse education

- 92 Universities and industry stakeholders must collaborate to address racism faced by healthcare students

#### Health promotion and public health

- 93 Optimising the knowledge of the characteristics of low BMI diabetes will allow a correct diagnosis and appropriate treatment
- 94 Woes of ethnic minority groups suffering from diabetes during the COVID-19 pandemic: high time to address the same
- 95 Daylight and dementia: don't stop going outside

#### Child health

- 96 Self-care strategies for children with epilepsy
- 97 Further evidence from a large US electronic health record-based study that some children and adolescents can develop postacute sequelae of SARS-CoV-2 infection
- 98 Hospital care among children with chronic illness during the COVID-19 pandemic in England
- 99 Maternal emotions increase the desire for antibiotic use and pressure on health professionals to prescribe antibiotics to their infants
- 100 Preventing cardiac arrest in high-risk children by implementing low-cost technology independent quality improvement safety bundle
- 101 Patterns of health service utilisation by children with intellectual disabilities require specific responses to reduce health inequalities

#### Adult nursing

- 102 Family presence during critical illness may protect against delirium
- 103 Early diuretic administration may improve outcomes for patients presenting with heart failure exacerbation
- 104 Rocuronium increases the risk of awareness with paralysis in mechanically ventilated ED patients: the need for multidisciplinary educational efforts
- 105 Collective experiences of people living with diabetes undertaking the inpatient journey and the nurses and midwives who support them

## July 2023 Volume 26 Issue 3

- 106 Site selection and incidence of peripheral intravenous catheter complications

### Palliative care

- 107 LGBT+-specific experiences of partner bereavement suggest avoiding assumptions, promoting agency in disclosure and using inclusive communication as key to safe, accessible, supportive care
- 108 More investment in end-of-life care training of healthcare professionals is required to enhance care, evidence and outcomes

### Women's health and midwifery

- 109 Unintended consequences of restricting father presence during maternity care during the COVID-19 pandemic
- 110 Menstrual cycle changes after COVID-19 vaccination or infection: not two sides of the same coin
- 112 COVID-19 pandemic service alterations linked to adverse impacts on perinatal and postpartum outcomes

### Care of the older person

- 113 Involving community healthcare professionals and empowering older adults and their informal carers may improve medication management following hospital discharge
- 114 First promising steps have been done, but there is still a long way to go: further evidence on the effectiveness of digitally delivered and home-based physical exercises to foster healthy ageing
- 115 Challenges and attitudes of the elderly population in using telemedicine services during the COVID-19 pandemic
- 116 Older adults in the USA with limited English proficiency have high rates of intensive end-of-life care and low rates of palliative care and advance care planning

### Intellectual disability nursing

- 117 Social isolation is aided by technology in people with a learning disability especially if living in services
- 118 Pilot study confirms the feasibility of implementing a group intervention to help people with intellectual disabilities cope with stigma
- 119 Nurses' perception of what makes a good care experience for children and young people with intellectual disabilities align with parents' perceptions
- 120 Nurses need to develop knowledge and skills to support the transition from child to adult health services for people with intellectual disabilities
- 121 Infant massage applied by parents of infants with Down syndrome (DS) increases their levels of acceptance, commitment and awareness of influence

### Mental health

- 122 Perceptions of the realisation of recovery-oriented principles in psychiatric hospitals are lower among service users and family members than staff
- 123 Walking in nature can help depression
- 124 Patient deaths by suicide significantly affect clinicians
