## Contents

### Editorial

- 125** NHS England long-term workforce plan: Can this deliver the workforce transformation so urgently needed or is it just more rhetoric?

### Resources

- 128** Resources page

### Research made simple

- 129** Phenomenography: an alternative to the usual qualitative method

### Evidence for nurse education

- 131** Experiences of newly registered nurses transitioning from nursing student to registered nurse: a qualitative systematic review

### Commentaries

#### Women's health and midwifery

- 133** Commentary on a Turkish kangaroo care study
- 134** Overview of the role of different conservative interventions as first-line treatment in the management of urinary incontinence in women
- 135** Women's perceptions of risk, safety and autonomy drive what we (providers and society) consider non-normative choices in pregnancy and childbirth
- 136** Mental state, well-being and coping are affected by a high-risk pregnancy

#### Health promotion and public health

- 137** How misinformation exposure influences vaccine status
- 138** Sources of vaccine information may have role in decreasing hesitancy among healthcare workers in UK toward receiving COVID-19 regularly
- 139** Improving consensus-based evidence from Delphi studies with coproduced qualitative research
- 140** Becoming unable to afford adequate home heating is associated with increased risk of severe mental distress

#### Nursing issues

- 141** Stigmatisation and workplace violence against healthcare workers: the need for evidence-based preventive strategies
- 142** Perceived organisation support would buffer the impact of work frustration on burn-out among intensive care unit nurses
- 143** Build teamwork on a solid foundation: team familiarity promotes effective interprofessional collaboration
- 144** One-third of nurses intend to leave their job because of the COVID-19 pandemic

#### Child health

- 145** Need to reduce anxiety and obtain individualised information are considered the main supportive components of parents/caregivers of children with cancer through the COVID-19 pandemic in the UK

## October 2023 Volume 26 Issue 4

- 146** What we can learn from paediatric ED visit changes during pandemics and epidemics

#### Adult nursing

- 147** Oxygen supplementation above a low-flow nasal cannula in patients with COVID-19 may improve arterial oxygen levels but not breathlessness
- 148** Early mobilisation in the intensive care unit randomised controlled trial: a need to look beyond the surface
- 149** Home-based model is an important cost-effective alternative to centre-based cardiac rehabilitation
- 150** Nurse-driven patient empowerment intervention reduces patients anxiety and depression during the discharge from critical care units

#### Nurse education

- 151** Role of nursing education to facilitate nursing students' competency to recognise and respond to intimate partner violence
- 152** Clinical nursing supervisors and healthcare staff play a significant role in decreasing undergraduate baccalaureate nursing student clinical stress
- 153** International clinical experiences may increase cultural competency and support nurses' personal and professional development
- 154** To die or not to die: manikin death in resuscitation simulation does not impact nursing students' self-efficacy
- 155** Research skills should be embedded in undergraduate nursing programmes

#### Mental health

- 156** Improved grief and symptoms of depression in bereaved siblings: promising findings from an online intervention
- 157** Statutory mental health services in the UK do not meet the needs of people from ethnic minority groups

#### Intellectual disability nursing'

- 158** Digital mental health interventions with individual support may complement mental health services for adults with intellectual disabilities
- 159** Fathers with intellectual disabilities require support to successfully navigate fatherhood
- 160** Efficacy of light intervention in improving mood and behaviour, but not sleep in intellectually disabled older adults
- 161** Women with intellectual disability require accessible and inclusive reproductive healthcare

#### Care of the older person

- 162** People affected by dementia had mixed experiences of using technology during COVID-19
- 163** Virtual wards versus hospital at home: care models for older people
- 164** Refusal of care behaviours among people with major neurocognitive disorder highlight the need for multiple research approaches to account for the complexity of the phenomenon
