Evaluation of studies of causation (aetiology) 36

Treatment

Higher oxygen saturation targets did not improve growth and neurodevelopment in extremely preterm infants 41

A case manager plus psychoeducation reduced adverse outcomes in youth with type 1 diabetes 42

Ear drops containing steroids were better than acetic acid for otitis externa 43

Review: evidence is lacking that adults given fluids 1.5 to 3 hours preoperatively have greater risks of aspiration or regurgitation than those given a standard fast 44

Immediate removal of indwelling catheters after hysterectomy was not associated with adverse outcomes 45

A nurse led smoking cessation intervention increased cessation rates after hospital admission for coronary heart disease 46

Selective decontamination of the digestive tract reduced intensive care unit and hospital mortality in adults 47

Nurse led clinics controlled hypertension and hyperlipidaemia better than usual care in diabetes 48

Oestrogen plus progestogen did not prevent cardiovascular disease in postmenopausal women 49

Review: regular inhaled short acting β_2 agonists improve lung function in stable chronic obstructive pulmonary disease 50

Review: group interventions may improve coping, quality of life, and social support in patients with arthritic conditions, but more research is needed 51

Cognitive behavioural therapy improved benzodiazepine discontinuation in chronic insomnia 52

Ethics consultations reduced hospital, ICU, and ventilation days in patients who died before hospital discharge in the ICU 53

Cognitive stimulation therapy improved cognition and quality of life in dementia 54

Multisensory stimulation was not better than usual activities for changing cognition, behaviour, and mood in dementia 55

Assessment (screening or diagnosis)

Review: the whispered voice test is accurate for detecting hearing impairment in children and adults 56

Quality improvement

Group visits improved concordance with American Diabetes Association practice guidelines in type 2 diabetes 57

A nurse case management intervention improved medical care given to older women with newly diagnosed breast cancer 58

Qualitative

The experiences of children and adolescents living with ADHD were reflected in 6 themes 59

Living with the Ilizarov frame was better than expected 60

Unacceptability of routine screening for postnatal depression was related to the screening process, the intrusiveness of questions, and the stigma of disease... 61

Patients resisted attempts to link smoking to their current medical problems in general practice consultations 62

Gender, age, religion, and tradition influenced the smoking attitudes and behaviour of Bangladeshi and Pakistani adults 63

The covenantal or communal values of surgeons and intensivists influenced end-of-life care in 3 intensive care units 64
