OTHER ARTICLES NOTED (16 February 2006 to 25 May 2007)

A list of the journals that are reviewed and the criteria for selecting articles from these journals for inclusion in Evidence-Based Nursing are included in each issue. The following articles passed all criteria but were not abstracted because, in the judgment of the editors, their findings were less widely applicable to nursing practice, the topic was of interest to only a select group of nurse specialists, or the topic was recently addressed in another abstract.

In the future, articles in all categories (except for Qualitative) will be rated for clinical relevance and newsworthiness by practising nurses; mean scores will displayed. In the current list, only some articles include ratings as we make the transition to this new format. To view a sample rating form, go to: http://hiru.mcmaster.ca/more/RatingFormSampleNsg.htm
